

## SMU Flowchart for COVID-19

## Procedure in DGMMAH

1. In DGMMAH patient waits for results if acutely ill otherwise patient is advised to go self-isolate until results are received from the laboratory (at least **48-72 hours**).
2. If negative, patient is released from self-quarantine back into campus/society.
3. If positive, patient is sent into **isolation for 14 days** and then tested at the end of the 14 days to determine negative status before being allowed back on campus.
4. Contact tracing and management for the protection of the community is then simultaneously started through the District Health team.

## Daily routine for students in SMU during COVID-19 period

1. Wash your hands and disinfect before entering clinical training facility, hospital or other place where contact with patients is to occur.
2. Use personal protective equipment (PPE) if provided at the facility.
3. Use a clean cloth mask daily if there is no need for PPE. **DO NOT** use same mask repeatedly without washing.
4. Avoid MEN (touching your mouth, eyes and nose). The mask may be a trigger to touch yourself **BUT** consciously avoid this.
5. Before entering the SMU campus from training, disinfect thoroughly at point of entry. Hopefully, you have washed your hands with soap and water at the end of the clinical training session.
6. **ALWAYS** observe the obvious infection control measures **WOMEN** (Washing your hands after every possible contamination with soap and water or disinfecting with sanitizer; Observing cough etiquette by coughing into a flexed elbow or tissue and discarding it immediately; Maintaining physical distancing whenever possible; **Maintain social distancing and Mask up at all times** when you enter into public spaces, especially including getting into the wards; Exercise and eat well to maintain a healthy immune system; No unnecessary traveling and socializing to avoid exposing yourself.
